

H1 – Ignition: disproportion is manufactured by unequal exposure, not by volume

Mean over 250 seeds, four runs per seed; bands are ± 1 s.d. Small world $N = 1000$, $\langle k \rangle = 10$, $\varepsilon = 0.5$, $\mu = 0.30$, $\delta = 0.25$, $\omega = 0.35$; $\alpha_D = 0.7$ in (a)–(c).

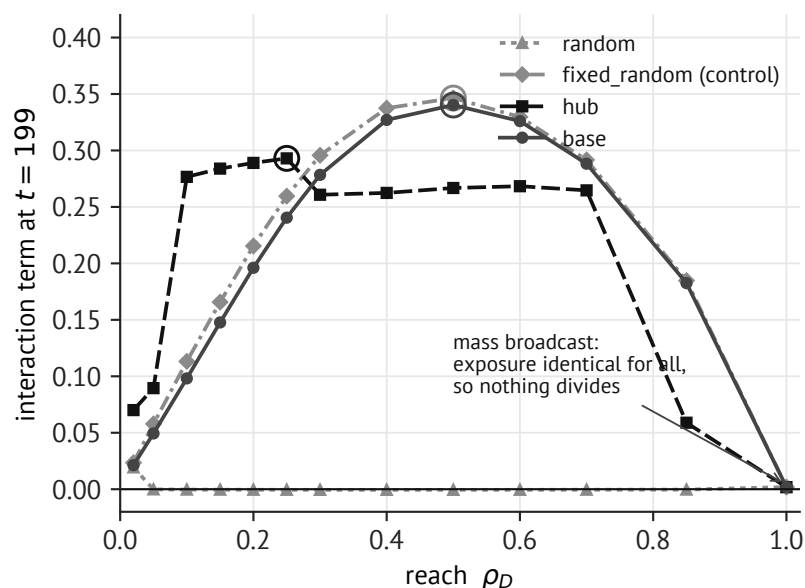

a Disproportion against reach, small world

b The hub repertoire across topologies

c Manufactured division peaks at intermediate reach

d Depth is a gate, reach is the dial
